## Trig Final (Practice v14)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 11 meters. The angle measure is 3.1 radians. How long is the arc in meters?

### Question 2

Consider angles  $-\frac{11\pi}{3}$  and  $\frac{9\pi}{4}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\cos\left(-\frac{11\pi}{3}\right)$  and  $\sin\left(\frac{9\pi}{4}\right)$  by using a unit circle (provided separately).

Find  $\cos(-11\pi/3)$

Find  $\sin(9\pi/4)$

**Question 3**

If  $\tan(\theta) = \frac{24}{7}$ , and  $\theta$  is in quadrant III, determine an exact value for  $\sin(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a frequency of 4.37 Hz, an amplitude of 8.72 meters, and a midline at  $y = -7.63$  meters. At  $t = 0$ , the mass is at the minimum height. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
