## Trig Final (TEST v627)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 1 radians. The radius is 8.9 meters. How long is the arc in meters?

### Question 2

Consider angles  $-\frac{13\pi}{6}$  and  $\frac{9\pi}{4}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(-\frac{13\pi}{6}\right)$  and  $\cos\left(\frac{9\pi}{4}\right)$  by using a unit circle (provided separately).

Find  $\sin(-13\pi/6)$

Find  $\cos(9\pi/4)$

**Question 3**

If  $\cos(\theta) = \frac{-5}{13}$ , and  $\theta$  is in quadrant II, determine an exact value for  $\sin(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a frequency of 7.6 Hz, a midline at  $y = -8.96$  meters, and an amplitude of 3.43 meters. At  $t = 0$ , the mass is at the minimum height. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
