

Name: _____

Date: _____

Trig Final (Practice v12)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 4.8 radians. The radius is 15 meters. How long is the arc in meters?

Question 2

Consider angles $\frac{9\pi}{4}$ and $-\frac{11\pi}{3}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\sin\left(\frac{9\pi}{4}\right)$ and $\cos\left(-\frac{11\pi}{3}\right)$ by using a unit circle (provided separately).

Find $\sin(9\pi/4)$

Find $\cos(-11\pi/3)$

Question 3

If $\tan(\theta) = \frac{-24}{7}$, and θ is in quadrant IV, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with a frequency of 5.18 Hz, an amplitude of 8.05 meters, and a midline at $y = 2.44$ meters. At $t = 0$, the mass is at the midline and moving down. Write an equation to model the height (y in meters) as a function of time (t in seconds).
