

Name: _____

Date: _____

Trig Final (Practice v35)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

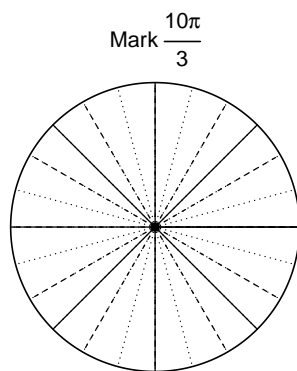

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 70 meters. The angle measure is 0.84 radians. How long is the arc in meters?

Question 2

Consider angles $\frac{10\pi}{3}$ and $\frac{-11\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{10\pi}{3}\right)$ and $\sin\left(\frac{-11\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\cos(10\pi/3)$

Find $\sin(-11\pi/4)$

Question 3

If $\sin(\theta) = \frac{56}{65}$, and θ is in quadrant II, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 7.68 meters, a frequency of 6.46 Hz, and a midline at $y = 5.25$ meters. At $t = 0$, the mass is at the maximum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
