### Polynomial Factoring practice (version 4)

1. The quadratic formula says if  $ax^2 + bx + c = 0$  then  $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$ . Use the quadratic formula to solve the following equation.

$$x^2 + 8x + 36 = 0$$

Simplify your answer(s) as much as possible.

2. Express the product of  $7 + 6i$  and  $3 + 4i$  in standard form  $(a + bi)$ .

### Polynomial Factoring practice (version 4)

3. Write function  $f(x) = x^3 + 9x^2 + 8x - 60$  in factored form. I'll give you a hint: one factor is  $(x + 5)$ .

4. Polynomial  $p$  is defined below in factored form.

$$p(x) = (x + 7)^2 \cdot (x + 4)^2 \cdot (x - 1)^2 \cdot (x - 5)$$

Sketch a graph of polynomial  $y = p(x)$ .
