Date: _____

Trig Final (SLTN v687)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 13 meters. The radius is 5.9 meters. What is the angle measure in radians?

$$\theta = \frac{L}{r} \quad r = \frac{L}{\theta} \quad L = r\theta$$

$\theta = 2.203$ radians.

Question 2

Consider angles $-\frac{10\pi}{3}$ and $\frac{9\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\sin\left(-\frac{10\pi}{3}\right)$ and $\cos\left(\frac{9\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\sin(-10\pi/3)$

$$\sin(-10\pi/3) = \frac{\sqrt{3}}{2}$$

Find $\cos(9\pi/4)$

$$\cos(9\pi/4) = \frac{\sqrt{2}}{2}$$

Question 3

If $\sin(\theta) = \frac{-55}{73}$, and θ is in quadrant IV, determine an exact value for $\cos(\theta)$.

Ignore any negatives and the quadrant, and draw a right triangle (based on SOHCAHTOA) in standard (quadrant I) orientation.

Solve the Pythagorean Equation

$$\begin{aligned}A^2 + 55^2 &= 73^2 \\A &= \sqrt{73^2 - 55^2} \\A &= 48\end{aligned}$$

Rescale the triangle so the hypotenuse is 1. Reflect the triangle into Quadrant IV in a unit circle.

$$\cos(\theta) = \frac{48}{73}$$

Question 4

A mass-spring system oscillates vertically with a frequency of 8.91 Hz, a midline at $y = -5.94$ meters, and an amplitude of 2.97 meters. At $t = 0$, the mass is at the midline and moving down. Write an equation to model the height (y in meters) as a function of time (t in seconds).

Any of these equations would get full credit.

$$y = -2.97 \sin(2\pi 8.91t) - 5.94$$

or

$$y = -2.97 \sin(17.82\pi t) - 5.94$$

or

$$y = -2.97 \sin(55.98t) - 5.94$$
