## Trig Final (TEST v698)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 47 meters. The angle measure is 1.2 radians. How long is the radius in meters?

### Question 2

Consider angles  $\frac{11\pi}{4}$  and  $\frac{-23\pi}{6}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(\frac{11\pi}{4}\right)$  and  $\cos\left(\frac{-23\pi}{6}\right)$  by using a unit circle (provided separately).

Find  $\sin(11\pi/4)$

Find  $\cos(-23\pi/6)$

**Question 3**

If  $\tan(\theta) = \frac{-35}{12}$ , and  $\theta$  is in quadrant II, determine an exact value for  $\sin(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a midline at  $y = 8.3$  meters, an amplitude of 3.39 meters, and a frequency of 4.51 Hz. At  $t = 0$ , the mass is at the midline and moving up. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
