## Trig Final (TEST v688)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 2.2 radians. The arc length is 13 meters. How long is the radius in meters?

### Question 2

Consider angles  $-\frac{15\pi}{4}$  and  $\frac{19\pi}{6}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\cos\left(-\frac{15\pi}{4}\right)$  and  $\sin\left(\frac{19\pi}{6}\right)$  by using a unit circle (provided separately).

Find  $\cos(-15\pi/4)$

Find  $\sin(19\pi/6)$

**Question 3**

If  $\sin(\theta) = \frac{-80}{89}$ , and  $\theta$  is in quadrant III, determine an exact value for  $\tan(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with a midline at  $y = -8.11$  meters, an amplitude of 4.26 meters, and a frequency of 6.95 Hz. At  $t = 0$ , the mass is at the minimum height. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
