Date: _____

Trig Final (Practice v41)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 4.7 meters. The arc length is 21 meters. What is the angle measure in radians?

Question 2

Consider angles $-\frac{13\pi}{6}$ and $\frac{11\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(-\frac{13\pi}{6}\right)$ and $\sin\left(\frac{11\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\cos(-13\pi/6)$

Find $\sin(11\pi/4)$

Question 3

If $\tan(\theta) = \frac{-63}{16}$, and θ is in quadrant II, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with a midline at $y = -5.22$ meters, an amplitude of 2.17 meters, and a frequency of 6.45 Hz. At $t = 0$, the mass is at the midline and moving down. Write an equation to model the height (y in meters) as a function of time (t in seconds).
