## Trig Final (TEST v668)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 3.1 meters. The arc length is 14 meters. What is the angle measure in radians?

### Question 2

Consider angles  $\frac{17\pi}{6}$  and  $\frac{-9\pi}{4}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(\frac{17\pi}{6}\right)$  and  $\cos\left(\frac{-9\pi}{4}\right)$  by using a unit circle (provided separately).

Find  $\sin(17\pi/6)$

Find  $\cos(-9\pi/4)$

**Question 3**

If  $\sin(\theta) = \frac{12}{13}$ , and  $\theta$  is in quadrant II, determine an exact value for  $\tan(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with an amplitude of 5.21 meters, a frequency of 2.59 Hz, and a midline at  $y = -7.5$  meters. At  $t = 0$ , the mass is at the midline and moving down. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
