Date: _____

Trig Final (TEST v600)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

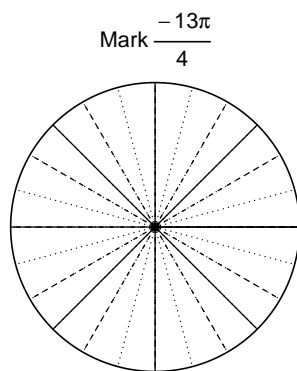

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 18 meters. The angle measure is 4.9 radians. How long is the radius in meters?

Question 2

Consider angles $-\frac{13\pi}{4}$ and $\frac{7\pi}{3}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(-\frac{13\pi}{4}\right)$ and $\sin\left(\frac{7\pi}{3}\right)$ by using a unit circle (provided separately).

Find $\cos(-13\pi/4)$

Find $\sin(7\pi/3)$

Question 3

If $\cos(\theta) = \frac{-12}{37}$, and θ is in quadrant III, determine an exact value for $\sin(\theta)$.

Question 4

A mass-spring system oscillates vertically with a midline at $y = 6.04$ meters, an amplitude of 2.94 meters, and a frequency of 7.62 Hz. At $t = 0$, the mass is at the maximum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
