**Intervals, Transformations, and Slope Solution (version 180)**1. The function  $f$  is graphed below.

Indicate the following intervals using interval notation. Remember, you can use  $\cup$  between two intervals to indicate the union. Except for range, all intervals will indicate  $x$  values; this is standard.

Feature	Where
Positive	$(-6, -4) \cup (2, 9)$
Negative	$(-7, -6) \cup (-4, 2)$
Increasing	$(-7, -5) \cup (-3, 5)$
Decreasing	$(-5, -3) \cup (5, 9)$
Domain	$(-7, 9)$
Range	$(-10, 10)$

## Intervals, Transformations, and Slope Solution (version 180)

2. In the four graphs below,  $y = f(x)$  is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.

3. Let function  $g$  be defined by the table below. Use the formula  $\frac{g(x_2) - g(x_1)}{x_2 - x_1}$  to find the average rate of change between  $x_1 = 14$  and  $x_2 = 54$ . Express your answer as a reduced fraction.

$x$	$g(x)$
3	14
14	28
28	54
54	3

$$\frac{g(54) - g(14)}{54 - 14} = \frac{3 - 28}{54 - 14} = \frac{-25}{40}$$

The greatest common factor of -25 and 40 is 5. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-5}{8}$$
