

Name: _____

Date: _____

Trig Final (Practice v45)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 64 meters. The radius is 28 meters. What is the angle measure in radians?

Question 2

Consider angles $-\frac{15\pi}{4}$ and $\frac{23\pi}{6}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(-\frac{15\pi}{4}\right)$ and $\sin\left(\frac{23\pi}{6}\right)$ by using a unit circle (provided separately).

Find $\cos(-15\pi/4)$

Find $\sin(23\pi/6)$

Question 3

If $\tan(\theta) = \frac{-21}{20}$, and θ is in quadrant II, determine an exact value for $\sin(\theta)$.

Question 4

A mass-spring system oscillates vertically with a frequency of 4.24 Hz, a midline at $y = -6.1$ meters, and an amplitude of 2.9 meters. At $t = 0$, the mass is at the maximum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
