

Name: _____

Date: _____

Trig Final (TEST v632)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 25 meters. The radius is 9.3 meters. What is the angle measure in radians?

Question 2

Consider angles $-\frac{23\pi}{6}$ and $\frac{13\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(-\frac{23\pi}{6}\right)$ and $\sin\left(\frac{13\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\cos(-23\pi/6)$

Find $\sin(13\pi/4)$

Question 3

If $\tan(\theta) = \frac{-24}{7}$, and θ is in quadrant IV, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 2.07 meters, a frequency of 7.2 Hz, and a midline at $y = -8.7$ meters. At $t = 0$, the mass is at the midline and moving up. Write an equation to model the height (y in meters) as a function of time (t in seconds).
