

Name: _____

Date: _____

Trig Final (TEST v667)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 37 meters. The angle measure is 1.5 radians. How long is the radius in meters?

Question 2

Consider angles $-\frac{9\pi}{4}$ and $\frac{7\pi}{3}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(-\frac{9\pi}{4}\right)$ and $\sin\left(\frac{7\pi}{3}\right)$ by using a unit circle (provided separately).

Find $\cos(-9\pi/4)$

Find $\sin(7\pi/3)$

Question 3

If $\tan(\theta) = \frac{-40}{9}$, and θ is in quadrant IV, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 2.05 meters, a frequency of 4.95 Hz, and a midline at $y = -6.63$ meters. At $t = 0$, the mass is at the maximum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
