## Trig Final (TEST v672)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

### Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 67 meters. The arc length is 280 meters. What is the angle measure in radians?

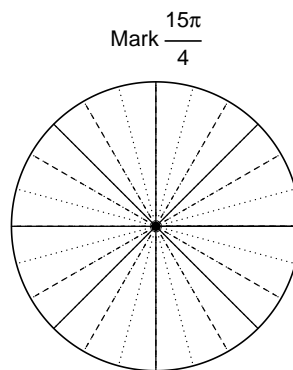

### Question 2

Consider angles  $-\frac{13\pi}{6}$  and  $\frac{15\pi}{4}$ . For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for  $\sin\left(-\frac{13\pi}{6}\right)$  and  $\cos\left(\frac{15\pi}{4}\right)$  by using a unit circle (provided separately).

Find  $\sin(-13\pi/6)$

Find  $\cos(15\pi/4)$

**Question 3**

If  $\tan(\theta) = \frac{60}{11}$ , and  $\theta$  is in quadrant III, determine an exact value for  $\cos(\theta)$ .

**Question 4**

A mass-spring system oscillates vertically with an amplitude of 8.23 meters, a midline at  $y = -4.74$  meters, and a frequency of 2.95 Hz. At  $t = 0$ , the mass is at the midline and moving up. Write an equation to model the height ( $y$  in meters) as a function of time ( $t$  in seconds).
