Date: _____

Trig Final (TEST v621)

- You should have a calculator (like [Desmos](#)) and a [unit-circle](#) reference sheet.

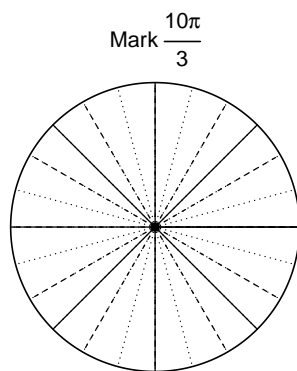

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 1.4 radians. The radius is 46 meters. How long is the arc in meters?

Question 2

Consider angles $\frac{10\pi}{3}$ and $\frac{-9\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\sin\left(\frac{10\pi}{3}\right)$ and $\cos\left(\frac{-9\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\sin(10\pi/3)$

Find $\cos(-9\pi/4)$

Question 3

If $\sin(\theta) = \frac{55}{73}$, and θ is in quadrant II, determine an exact value for $\tan(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 7.19 meters, a midline at $y = 8.5$ meters, and a frequency of 4.9 Hz. At $t = 0$, the mass is at the midline and moving up. Write an equation to model the height (y in meters) as a function of time (t in seconds).
