

**Question 1**

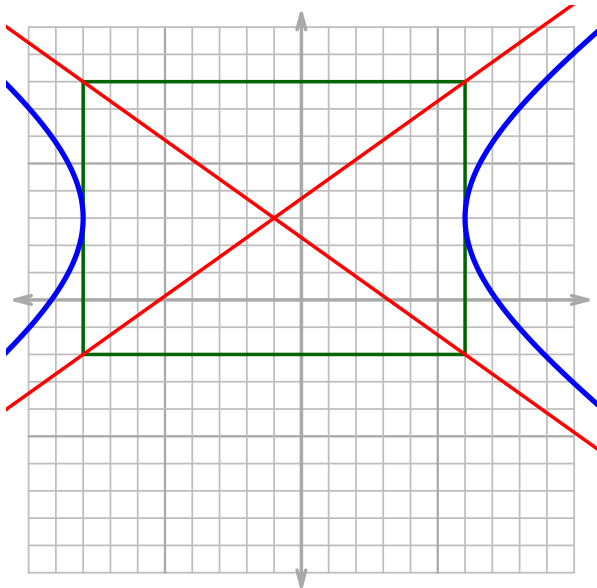

Please write the equation of the conic section graphed below. You can assume all vertices and co-vertices are on integer gridpoints.

$$\frac{(x-1)^2}{64} + \frac{(y+2)^2}{9} = 1$$

**Question 2**

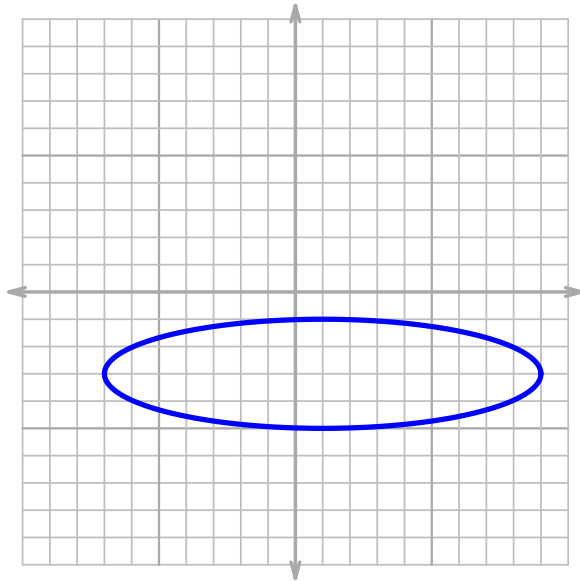

Please write the equation of the conic section graphed below. You can assume all vertices and co-vertices are on integer gridpoints.

$$\frac{(x+1)^2}{49} - \frac{(y-3)^2}{25} = 1$$

**Question 3**

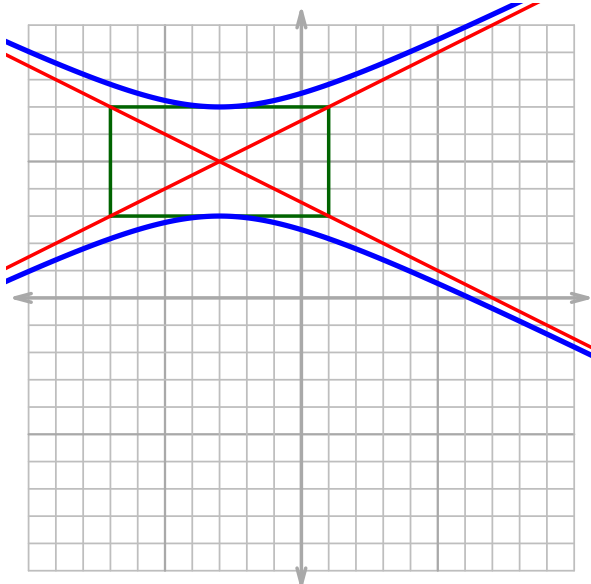

Graph the conic section represented by the equation. For a hyperbola, please include the central rectangle and the asymptotes.

$$\frac{(x-1)^2}{64} + \frac{(y+3)^2}{4} = 1$$

**Question 4**

Graph the conic section represented by the equation. For a hyperbola, please include the central rectangle and the asymptotes.

$$-\frac{(x+3)^2}{16} + \frac{(y-5)^2}{4} = 1$$
