**Intervals, Transformations, and Slope Solution (version 65)**1. The function  $f$  is graphed below.

Indicate the following intervals using interval notation. Remember, you can use  $\cup$  between two intervals to indicate the union. Except for range, all intervals will indicate  $x$  values; this is standard.

Feature	Where
Positive	$(-5, -1) \cup (3, 7)$
Negative	$(-6, -5) \cup (-1, 3)$
Increasing	$(-6, -4) \cup (2, 4)$
Decreasing	$(-4, 2) \cup (4, 7)$
Domain	$(-6, 7)$
Range	$(-7, 7)$

## Intervals, Transformations, and Slope Solution (version 65)

2. In the four graphs below,  $y = f(x)$  is graphed as a dotted line. With a solid line, please graph the transformations indicated by the equations below.

3. Let function  $g$  be defined by the table below. Use the formula  $\frac{g(x_2) - g(x_1)}{x_2 - x_1}$  to find the average rate of change between  $x_1 = 41$  and  $x_2 = 49$ . Express your answer as a reduced fraction.

$x$	$g(x)$
6	41
34	49
41	34
49	6

$$\frac{g(49) - g(41)}{49 - 41} = \frac{6 - 34}{49 - 41} = \frac{-28}{8}$$

The greatest common factor of -28 and 8 is 4. Divide numerator and denominator by the greatest common factor.

$$\text{AROC} = \frac{-7}{2}$$
