

Name: _____

Date: _____

Trig Final (TEST v639)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 58 meters. The angle measure is 5.5 radians. How long is the arc in meters?

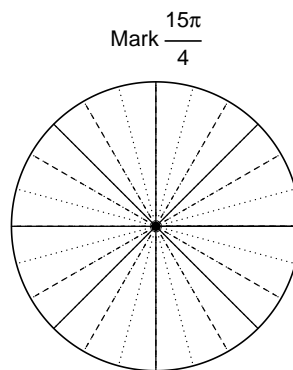

Question 2

Consider angles $-\frac{23\pi}{6}$ and $\frac{15\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(-\frac{23\pi}{6}\right)$ and $\sin\left(\frac{15\pi}{4}\right)$ by using a unit circle (provided separately).

Find $\cos(-23\pi/6)$

Find $\sin(15\pi/4)$

Question 3

If $\cos(\theta) = \frac{-20}{29}$, and θ is in quadrant II, determine an exact value for $\tan(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 3.2 meters, a midline at $y = 5.36$ meters, and a frequency of 7.24 Hz. At $t = 0$, the mass is at the midline and moving down. Write an equation to model the height (y in meters) as a function of time (t in seconds).
