Date: _____

Trig Final (Practice v44)

- You can use a calculator (like [Desmos](#))
- You should have a unit-circle with special angles and coordinates marked.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 1.6 radians. The radius is 39 meters. How long is the arc in meters?

Question 2

Consider angles $-\frac{15\pi}{4}$ and $\frac{23\pi}{6}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(-\frac{15\pi}{4}\right)$ and $\sin\left(\frac{23\pi}{6}\right)$ by using a unit circle (provided separately).

Find $\cos(-15\pi/4)$

Find $\sin(23\pi/6)$

Question 3

If $\cos(\theta) = \frac{48}{73}$, and θ is in quadrant IV, determine an exact value for $\tan(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 2.35 meters, a frequency of 4.09 Hz, and a midline at $y = -6.57$ meters. At $t = 0$, the mass is at the midline and moving up. Write an equation to model the height (y in meters) as a function of time (t in seconds).
