Unit-2 Mastery Assessment (version 627)

Question 1 (10 points)

Let f represent a function. If $f[50] = 4$, then there exists a knowable solution to the equation below.

$$y = 6 \cdot f[5(x + 2)] + 23$$

Find the solution.

$$x =$$

$$y =$$

Question 2 (20 points)

Graph the equations accurately. For each integer-integer point on the parent, indicate the corresponding point precisely. Also, with dashed lines, indicate any asymptotes.

$$y = x^2 + 2$$

$$y = (x - 2)^3$$

$$y = 2^{\frac{x}{2}}$$

$$y = \log_2(-x)$$

Question 2 continued...

$$y = (2x)^3$$

$$y = (x+2)^2$$

$$y = 2 \cdot \sqrt{x}$$

$$y = \sqrt[3]{x} - 2$$

$$y = \frac{\sqrt[3]{x}}{2}$$

$$y = -2^x$$

Question 3 (20 points)

A function is graphed below.

Indicate the following intervals using interval notation.

Feature	Where
Positive	
Negative	
Increasing	
Decreasing	
Domain	
Range	

Question 4 (20 points)

Let f represent a function. The curves $b = f[a]$ and $y = 2 \cdot f[3x - 6] + 4$ are represented below in a table and on graphs.

a	b	x	y
-39	22	-11	48
-24	-17	-6	-30
15	-16	7	-28
81	1	29	6

- Write formulas for calculating x from a and calculating y from b . (Or, write the coordinate transformation formula.)
- What geometric transformations (using words like translation, stretch, and shrink), and in what order, would transform the first curve $y = f[x]$ into the second curve $y = 2 \cdot f[3x - 6] + 4$?

Question 5 (10 points)

A parent square-root function is transformed in the following ways:

Horizontal transformations

1. Translate left by distance 1.
2. Horizontal reflection over y axis.

Vertical transformations

1. Translate up by distance 3.
2. Vertical shrink by factor 2.

Resulting graph (and parent function in dashed grey):

- What is the equation for the curve shown above?

Question 6 (20 points)

Make an accurate graph, and describe locations of features.

$$y = 3 \cdot |x + 4| - 6$$

Feature	Where
Domain	
Range	
Positive	
Negative	
Increasing	
Decreasing
