**p1020: graded take-home open-note practice exam (version 201)****Question 1**

Let  $f$  represent a function. If  $f[40] = 36$ , then there exists a knowable solution to the equation below.

$$y = \frac{f[2(x - 27)]}{18} + 32$$

Find the solution.

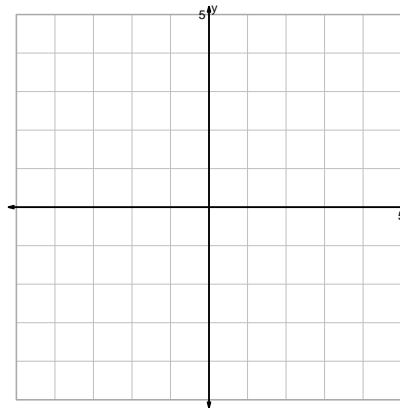

$x =$

$y =$

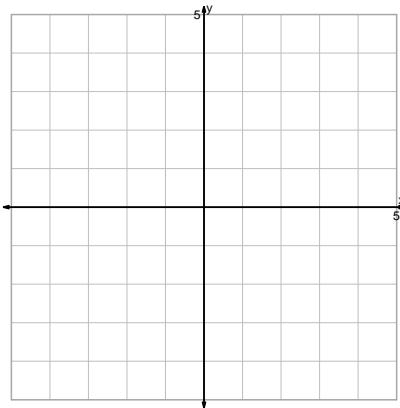

**Question 2**

Graph the equations accurately. For each integer-integer point on the parent, indicate the corresponding point precisely. Also, with dashed lines, indicate any asymptotes.

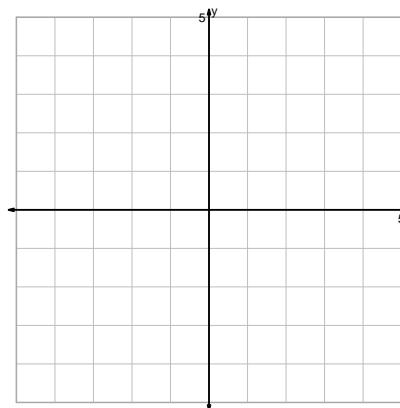

$$y = 2^{\frac{x}{2}}$$

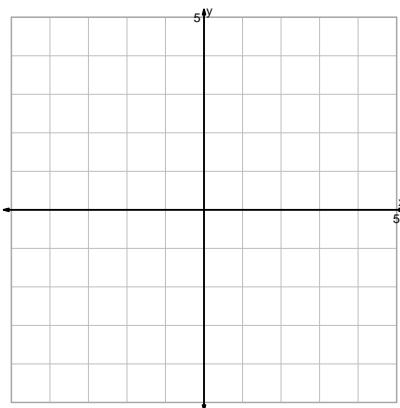

$$y = x^3 - 2$$

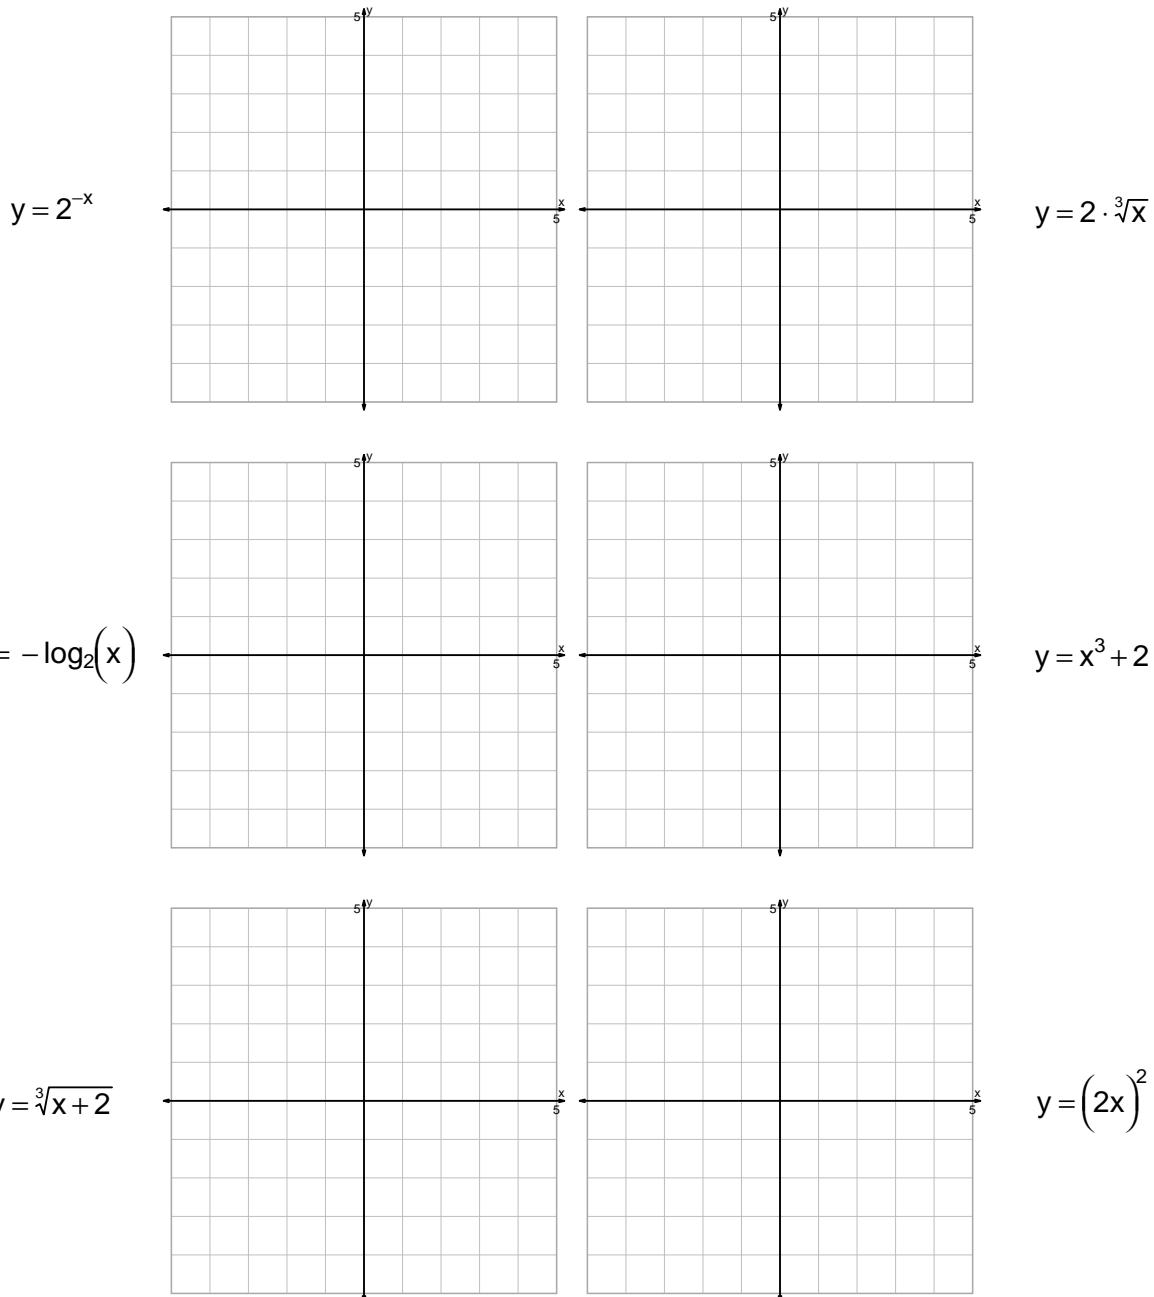

$$y = \log_2(x - 2)$$

$$y = \frac{\sqrt{x}}{2}$$

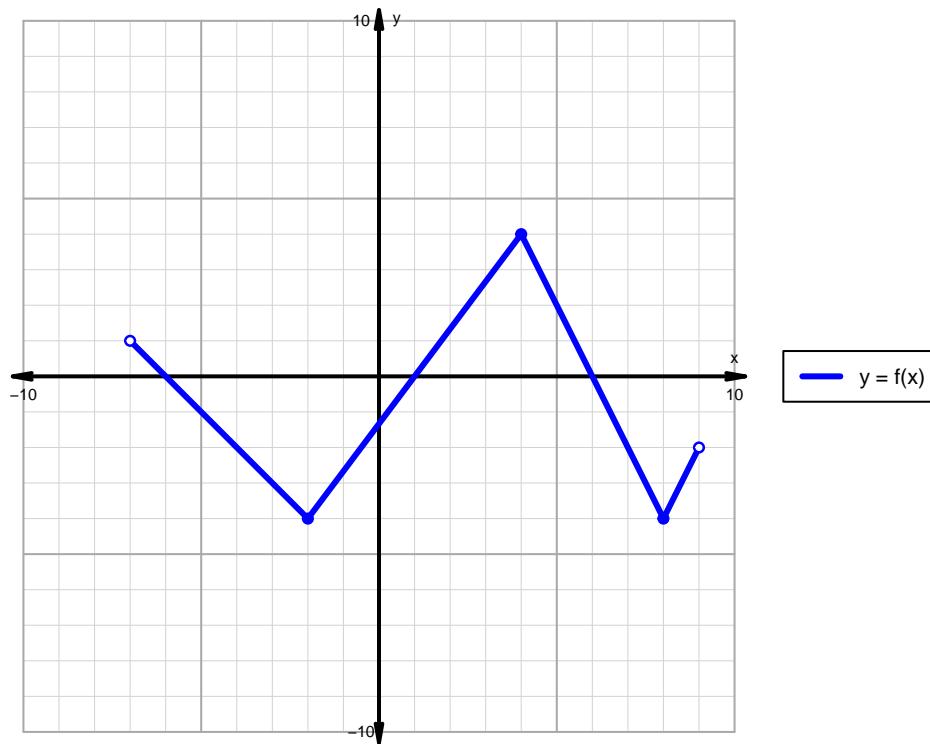

Question 2 continued...

**Question 3**

A function is graphed below.

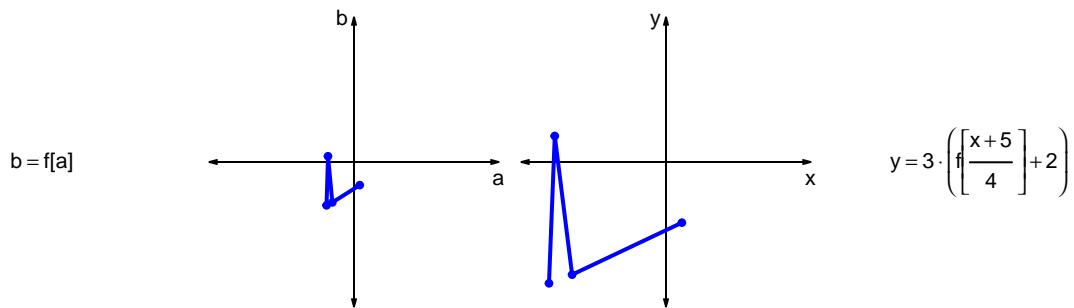

Indicate the following intervals using interval notation.

Feature	Where
Positive	
Negative	
Increasing	
Decreasing	
Domain	
Range	

## Question 4

Let  $f$  represent a function. The curves  $b = f[a]$  and  $y = 3 \cdot (f[\frac{x+5}{4}] + 2)$  are represented below in a table and on graphs.

a	b	x	y
-19	-30	-81	-84
-18	4	-77	18
-15	-28	-65	-78
4	-16	11	-42

- a. Write formulas for calculating  $x$  from  $a$  and calculating  $y$  from  $b$ . (Or, write the coordinate transformation formula.)
  
  - b. What geometric transformations (using words like translation, stretch, and shrink), and in what order, would transform the first curve  $y = f[x]$  into the second curve  $y = 3 \cdot \left(f\left[\frac{x+5}{4}\right] + 2\right)$ ?

### Question 5

A parent square-root function is transformed in the following ways:

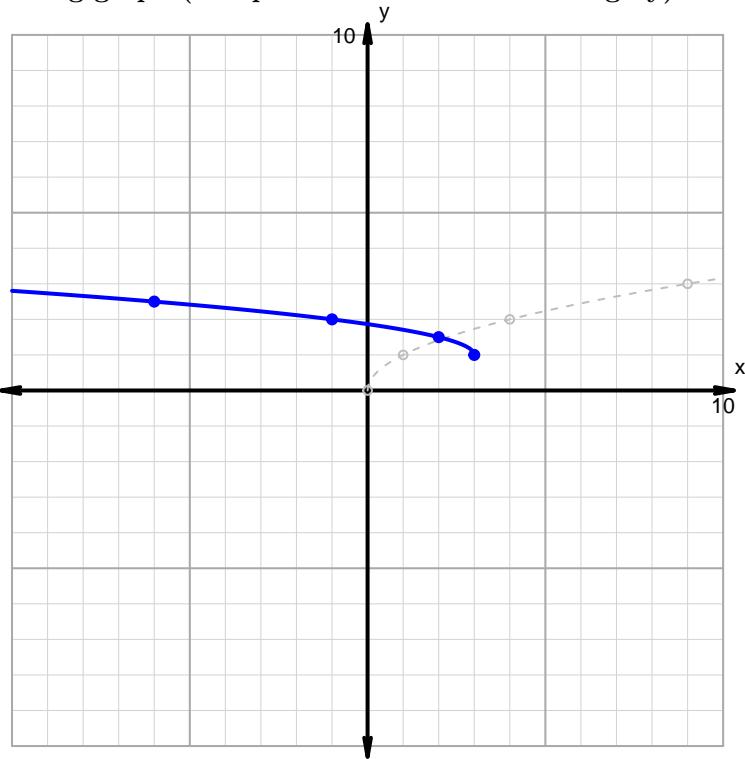

#### Horizontal transformations

1. Translate left by distance 3.
2. Horizontal reflection over  $y$  axis.

#### Vertical transformations

1. Vertical shrink by factor 2.
2. Translate up by distance 1.

Resulting graph (and parent function in dashed grey):

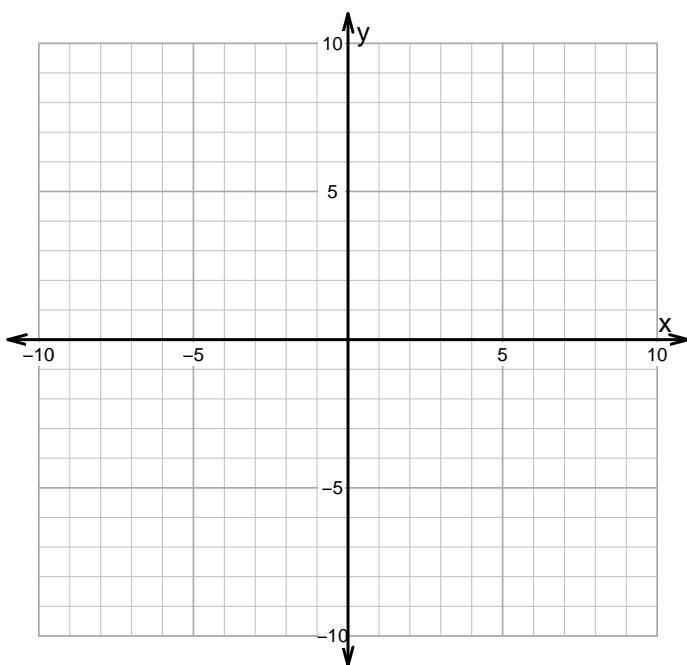

- What is the equation for the curve shown above?

**Question 6**

Make an accurate graph, and describe locations of features.

$$y = -3 \cdot |x - 2| + 3$$

Feature	Where
Domain	
Range	
Positive	
Negative	
Increasing	
Decreasing
