1. Each of the curves below represent a different y = f(x). For each, draw a second curve, y = g(x), defined by the equation above the graph.

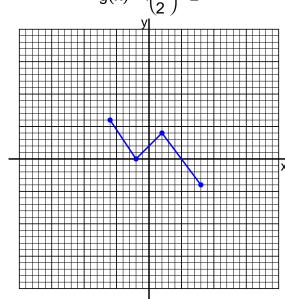

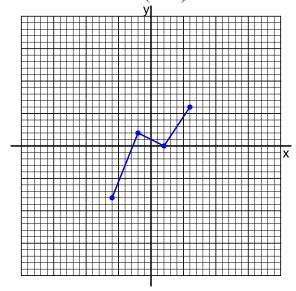

$$g(x) = f(x+2)-2$$

$$g(x) = f\left(\frac{x}{2}\right) - 2$$

$$g(x) = f(x-2) + 2$$

2. On each graph below, curve y = f(x) is shown as a dashed line with open dots at key points, and curve y = g(x) is shown as a solid line with closed dots at key points. For each, write an equation that defines g(x) as a transformation of f(x).
