# s19 Matrix Exam (practice v131)

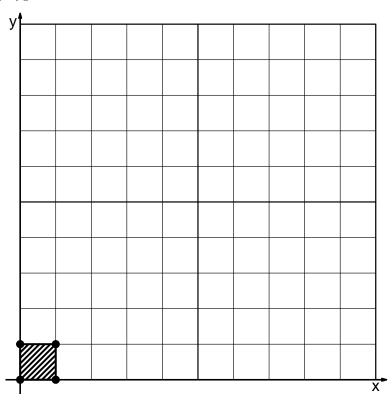

Let the  $2\times 4$  matrix U represent four points in the xy-plane (so each column represents a point). When those four points are connected as a convex polygon, matrix U represents a unit square. Also, let the  $2\times 2$  matrix L represent a linear transformation.

$$U = \begin{bmatrix} 0 & 1 & 1 & 0 \\ 0 & 0 & 1 & 1 \end{bmatrix} \qquad L = \begin{bmatrix} 5 & 1 \\ 4 & 6 \end{bmatrix}$$

Let matrix  $P = L \cdot U$ , so P is found by matrix multiplication of L times U. Matrix P also represents 4 points of a polygon. Use the diagram below to calculate the elements of P. Then, draw the polygon represented by matrix P on the xy-plane below. Notice I have already drawn the unit square represented by matrix U.

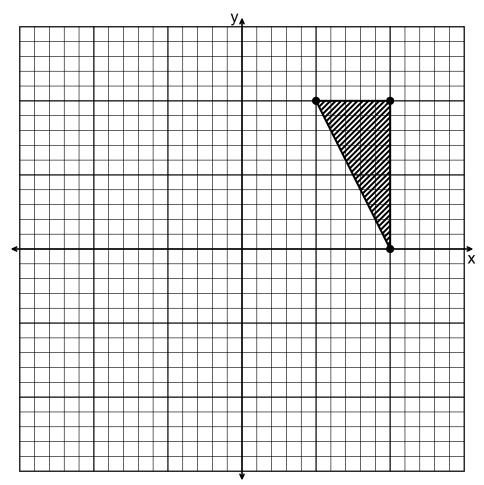

1. Multiply  $L \cdot U$  and draw resulting polygon.

The triangle shown below is composed of the three points represented by matrix  $A = \begin{bmatrix} 10 & 10 & 5 \\ 10 & 0 & 10 \end{bmatrix}$ . In order to reflect over the x axis, reflect over the y axis, and then rotate by 306.87° counterclockwise we can multiply by the transformation matrix  $R = \begin{bmatrix} -0.6 & -0.8 \\ 0.8 & -0.6 \end{bmatrix}$ .

3. Calculate the matrix  $R \cdot A$ .

# s19 Matrix Exam (practice v132)

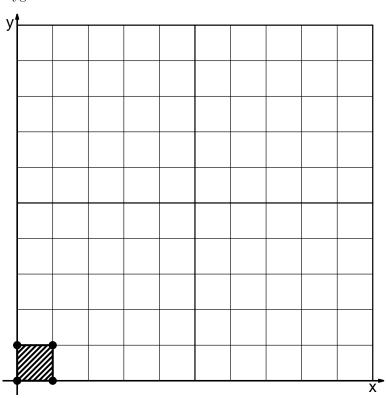

Let the  $2\times 4$  matrix U represent four points in the xy-plane (so each column represents a point). When those four points are connected as a convex polygon, matrix U represents a unit square. Also, let the  $2\times 2$  matrix L represent a linear transformation.

$$U = \begin{bmatrix} 0 & 1 & 1 & 0 \\ 0 & 0 & 1 & 1 \end{bmatrix} \qquad L = \begin{bmatrix} 9 & 1 \\ 2 & 6 \end{bmatrix}$$

Let matrix  $P = L \cdot U$ , so P is found by matrix multiplication of L times U. Matrix P also represents 4 points of a polygon. Use the diagram below to calculate the elements of P. Then, draw the polygon represented by matrix P on the xy-plane below. Notice I have already drawn the unit square represented by matrix U.

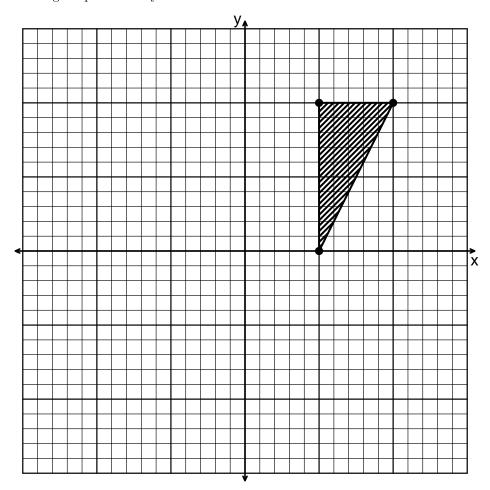

1. Multiply  $L \cdot U$  and draw resulting polygon.
