Name: _____   Date: _____
Trig Final (Practice v31)

- You should have a calculator (like Desmos) and a unit-circle reference sheet.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The radius is 130 meters. The arc length is 640 meters. What is the angle measure in radians?

Question 2

Consider angles $\frac{13\pi}{4}$ and $\frac{-10\pi}{3}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{13\pi}{4}\right)$ and $\sin\left(\frac{-10\pi}{3}\right)$ by using a unit circle (provided separately).

Mark $\dfrac{13\pi}{4}$

Find cos(13π/4)

Mark $\dfrac{-10\pi}{3}$
Find sin(−10π/3)

Question 3

If $\cos(\theta) = \frac{-9}{41}$, and θ is in quadrant III, determine an exact value for $\sin(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 4.58 meters, a frequency of 8.81 Hz, and a midline at $y = -7.77$ meters. At $t = 0$, the mass is at the minimum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
