# Trig Final (TEST v668)

- You should have a calculator (like Desmos) and a unit-circle reference sheet.
Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The arc length is 9.9 meters. The angle measure is 4.1 radians. How long is the radius in meters?

Question 2

Consider angles $\frac{-19\pi}{6}$ and $\frac{9\pi}{4}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{-19\pi}{6}\right)$ and $\sin\left(\frac{9\pi}{4}\right)$ by using a unit circle (provided separately).

Mark $\dfrac{-19\pi}{6}$

Find $\cos(-19\pi/6)$

Mark $\dfrac{9\pi}{4}$

Find $\sin(9\pi/4)$

Question 3

If $\sin(\theta) = \frac{80}{89}$, and θ is in quadrant II, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with an amplitude of 3.36 meters, a frequency of 7.92 Hz, and a midline at $y = 6.11$ meters. At $t = 0$, the mass is at the minimum height. Write an equation to model the height (y in meters) as a function of time (t in seconds).
