# Trig Final (TEST v624)

- You should have a calculator (like Desmos) and a unit-circle reference sheet.

Question 1

In the figure below, we see a circle and a central angle that subtends an arc. The angle measure is 4.6 radians. The radius is 28 meters. How long is the arc in meters?

Question 2

Consider angles $\frac{9\pi}{4}$ and $\frac{-10\pi}{3}$. For each angle, use a spiral with an arrow head to **mark** the angle on a circle below in standard position. Then, find **exact** expressions for $\cos\left(\frac{9\pi}{4}\right)$ and $\sin\left(\frac{-10\pi}{3}\right)$ by using a unit circle (provided separately).

Mark $\dfrac{9\pi}{4}$

Find cos(9π/4)

Mark $\dfrac{-10\pi}{3}$
Find sin(−10π/3)

Question 3

If $\sin(\theta) = \frac{55}{73}$, and θ is in quadrant II, determine an exact value for $\cos(\theta)$.

Question 4

A mass-spring system oscillates vertically with a frequency of 5.3 Hz, a midline at $y = 8.59$ meters, and an amplitude of 3.96 meters. At $t = 0$, the mass is at the midline and moving down. Write an equation to model the height (y in meters) as a function of time (t in seconds).
